## Park Coastal Wildlife - Ode the Places they will go

Project Title	Park Coastal Wildlife - Ode the Places they will go
Summary	Collect, synthesize, and use GIS data & knowledge as content for digital Story Maps about the use of GIS at Cape Hatteras National Seashore and another one or two on the CAHA specific species (Shorebirds and Sea Turtles).
Country	United States

#### **Project Description**

The National Park Service unit Cape Hatteras National Seashore (CAHA) is seeking one or more interns to create written content for internal and external use. Content will support the NPS.gov thematic framework, a mosaic of interwoven, thematically grouped subject sites based on CAHA resources, stories, wildlife and visitor experiences.

Specifically, we would like a story map using the data collected within the seashore boundaries, ArcGIS Online resources and research on the specific species (CAHA resource managers and park rangers will help with these sections). One story map will be used as an introduction to the park for new staff, visitors, and the general public. Another story map will be used as a resource for training on GIS tools used by the seasonal staff. This story map can have temporal data (e.g. yearly Loggerhead turtle nestings sites, American Oyster Catcher presence), how to use Collector, hints on ArcGIS AGOL for the new staff, etc.

We are looking for an individual with strong ArcGIS skills and understanding, excellent writing and editing skills, research skills, and ability to work collaboratively and has a high degree of self-motivation.

#### **Required Skills or Interests**

Skill(s)

GIS expertise

Research

Writing
